Anne,

This is to follow up on the Columbia Analytical data previously discussed.

These data include two data packages. One is Bates range MIMC HC 209586-209723. These data are from soil sampling on the upland sand separation area formerly owned by Big Star and now owned by the San Jacinto River Fleet. The data were presented to EPA as raw (prevalidation) data with the monthly report on December 15, 2010. Validated data were later posted to the EPA's data base on January 18, 2011.

The other Columbia data package is Bates range MIMC HC 210116-227297. This is a data package from tissue sampling at the Site. It was presented to EPA as raw (prevalidation) data with the monthly report on February 18, 2011. Validated data were posted to the EPA data base on March 20, 2011.

Please let me know if you have any further questions about this matter. Al
